L2 Systems provides professional program/systems management and engineering technical consulting services for government, industrial, medical and commercial applications. Our services include Program Management, Systems Engineering, Systems Integration, Logistics Support, Training, Business Development, Marketing, Hardware and Software Development for turnkey system solutions.

Our Mission: L2 Systems strives to provide solutions to its customers to the next level.

What is the next level?

The next level involves a *vision of the future*...competition, technology, solution trends, lifecycle cost/benefit analysis, management decisions, profitability. It involves taking customers beyond current paradigms and structures and beyond obsolete standards and norms with sound engineering and time-tested management methodologies. It involves a *conscious daily evaluation of concrete and testable project and system requirements* to insure that the greatest benefits of research and development efforts are achieved by making prudent decisions during project definition and execution.

Services

Program/Project Management:

L2 Systems combines technical and PMP business management expertise with a unique "Process - Discipline - Leadership" protocol for measurable results in:

- Strategic Planning & Organizational Alignment
- Business Process Optimization, Risk Management, Continuous Improvement (Kaizen Operations)
- Acquisition, Product Development & Lifecycle Management (Earned Value Management System)
- Information Management & Technology Applications, Technology Roadmap
- Manufacturing & Design-To-Unit-Production Cost analysis, Early Engineering Involvement, Value Stream Mapping
- Site, Facilities, & Infrastructure Planning & Capital Project Management
- Sustainment Program Management Services, Product Evolution and Maintenance and Repair Operations

Systems Engineering:

L2 Systems supports the development and execution of systems engineering programs particularly at the concept development and requirements definition, traceability and architecture level. L2 Systems has experience in the use of the "*Department of Defense's Architecture Framework*" concentrating on the integration of operational, systems, and technical views to program objectives. Our combination of technical and management expertise, and the ability to communicate, results in cost-effective program solutions for all our customers.

L2 Systems conforms to the GSA schedule 871-1 through 871-6 criteria for Professional Engineering Services (PES).

Systems Integration/Test and Evaluation:

L2 Systems provides turnkey solutions to field deployment in customer environment. This service reflects the validation of customer requirements and system architecture. The system Integration process identifies clear and achievable goals based on operational and performance requirements and reduces risk through facilities and site surveys conducted early in the integration phase.

Business Development/Marketing:

L2 Systems is sensitive to customer's continued business development and marketing strategies and provides business development services in concert with its professional management and technical integrated systems service. This service takes advantage of L2 Systems Data Management Resources to create proposal templates and source content in support of existing business plans, past project performance, customer intellectual property and resources. Expert use of internet SEO, social media, website structures, webinars, and email responders to enhance industry exposure.
